CHM135 TUTORIAL 5 PROBLEM SET

All the content on Term Test 1 was already covered in Tutorial Problem sets 1–4. For Tutorial 5, we have provided a large set of past test questions to give you practice with the style and format of CHM135 assessments. A typical term test has 12 multiple-choice questions plus one page (front and back) of short-answer questions with spaces to write your answers. The practice set provided here is intentionally longer to give you additional opportunities for review and to build confidence. When working through the questions, we recommend practicing under test conditions and using the periodic table and equation sheet posted on the *Problems and Quizzes* page, as these are the same resources that will be provided during the term test.

In addition to the problem set being different, the structure of Tutorial 5 will also be different. To give you a chance for self-assessment and to experience what it's like to write a university-level chemistry test, Tutorial 5 will begin with an individual self-assessment of the Term Test 1 content. You will then join your group to answer the same questions again in a TeamUp! quiz. Only the TeamUp! quiz counts toward your grade. Although Tutorial 5 TeamUp! includes more than one question, it carries the same weight (out of 5) as the other TeamUp! quizzes.

We encourage you to use this opportunity to prepare thoroughly for Term Test 1. Good luck, and happy studying!

MULTIPLE CHOICE QUESTIONS
