1. **[8 marks]** Beside each code fragment below, write what is printed when the code fragment is executed. If the code would cause an error, instead only write ERROR and give a brief explanation.

Solution

Code	Output or Cause of Error

`a = 1`
`c = a + 2`
`a = 10`
`print(c)`
	3

`s = 'abcdef'` `print(s[:3] + s[4:])`	abcef
