Test 1 Version B – Solutions

A1. [**2 marks**] A cyclist travels along a street. Their velocity $v(t)$ measured in km per hour is given in the table below, where t is measured in hours. Use the information in the table to write a Riemann sum that approximates the **total distance** travelled by the cyclist in the first 6 hours. Your Riemann sum should use 3 rectangles and **right endpoints**. You are **NOT** expected to use "summation notation". Your answer can contain "+" and other arithmetic symbols.

t	0	1	2	3	4	5	6
$v(t)$	4	3	-3	-5	6	2	-5
